

# Metal Processing Technology Consultancy and Problem Solving Services

## Advisory Services on Metal Processing

- Professional technical training
- On-site defects analysis and problem solving
- Metal die-casting, processing, surface treatment and problem solving
- Die-casting and metal forming system design and development
- Laser surface treatment (cladding and alloying)
- Laser welding and marking

## Tooling Design and Development

- Diagnose and optimise die-casting and forming tool design
- Design and fabricate jig and fixture

## Training Service on Metal Processing and Testing Technology

- Defects analysis and problem solving in die-casting and metal forming processes
- Product and raw material testing
- Material science in metal processing
- CAE simulation of metal forming process

## Our Competency

- Extensive practical experience and professional knowledge of product, process and tooling design
- High compliments from clients and proven track record for our consultancy services
